Visiting SOT?

Why not stop by our booth -#1248 - and talk to our experts. We specialise in early genetic toxicology screening and mechanistic follow up of positives, and can help you to make the most of your precious compounds

Either drop by, or [contact us](#) to prearrange a meeting.

Don't be surprised if we look a little different...

Whilst we are well known for our green logo and [GreenScreen HC](#), the time has come to change, The reason is that we now offer a wide range of assays for early genetic toxicology screening and mechanistic follow-up, and we wanted to reflect this in our image.

innovation and service

Innovation

Gentronix is committed to innovating in genetic toxicology by carrying out fundamental research, developing new assays and continuing to develop and improve on existing ones.

From early *In vitro* screening, to understanding the mechanism behind positive results: Gentronix is driving innovation.

newsletter

New BlueScreen HC Publication from GSK

Highlights

First paper on use of BlueScreen HC accepted by "Journal of Biomolecular Screening" "Development of a high-throughput Gaussia luciferase reporter assay for the activation of the GADD45a gene by mutagens, promutagens, clastogens, and..."

To accompany the new look we also have revised and expanded our website to make it more relevant to the industry sectors we serve.

See you at SOT...

Gentronix provides services and solutions to help organisations optimise the development of drugs and other chemicals, by reducing attrition due to toxicity thus ensuring safer products across a wide range of chemistry driven industries.

We provide contract services for genotoxicity using our patented human cell GADD45a reporter **GreenScreen® HC** and **BlueScreen HC™** assays and related assays including **Micronucleus**, **Ames MPF™**, **Comet** and various **Flow Cytometry** based assays and services.
